

CentoCustom Panel

#YourPatientYourChoice – Precision, maximum flexibility, and clinical relevance for every individual case.

Available with
CentoGenome
powered Backbone

Empowering Physicians with Maximum Flexibility in Precision Medicine.

Because each patient is unique, their diagnostic approach should be too. With CentoCustom Panel, physicians have the flexibility to create a gene panel tailored to individual patient's needs, ensuring a precise, patient-centric approach to genetic testing.

Updated Now Available: Additional options to include research genes.

Who Should Consider CentoCustom Panel?

- ✓ **Physicians** who need a targeted approach for specific clinical cases or want to limit the analysis and interpretation to aspects of the clinical presentation.
- ✓ **Clinicians** requiring greater control over the gene selection and ability to include the latest gene discoveries in their diagnostic panel.
- ✓ **Healthcare Providers** looking for flexibility in genetic diagnostic testing.
- ✓ **Researchers & Innovations Teams** wanting to go beyond the diagnostic gene list.

Bringing the Pieces Together

Full Flexibility in Panel Design - More than 25,000 Genes Available

Flexibility in Backbone Selection
CentoXome (WES) or CentoGenome (WGS)

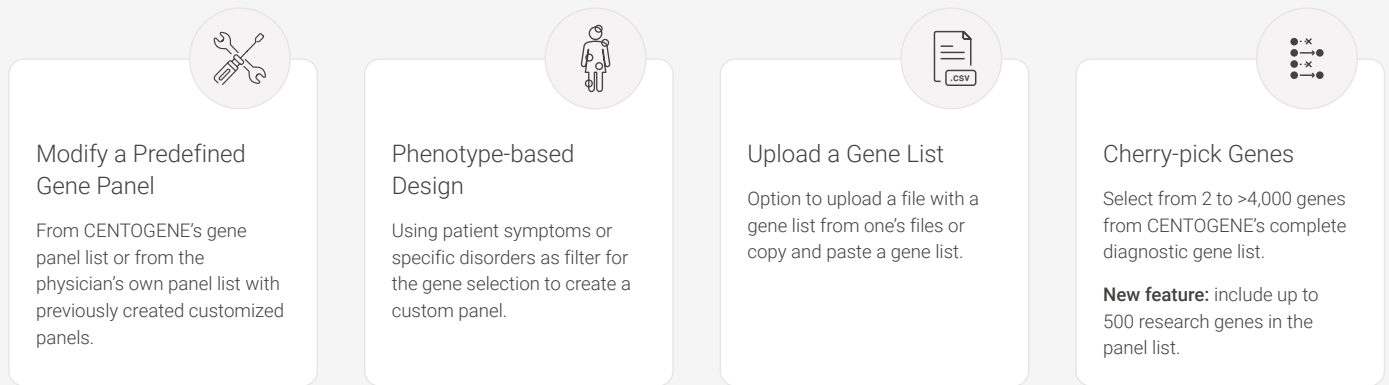

Flexibility in Gene Selection
Panel creation by selecting from 2 to >4,000 genes from CENTOGENE's complete diagnostic gene list
Option to add research genes

Backed by CENTOGENE's Biodatabank
>1M patient cases analyzed contribute to our expertise in diagnostic gene and variant curation and medical interpretation of the results

Results in
15 business days

Customization in 4 Different Ways

4 Panel Sizes Available

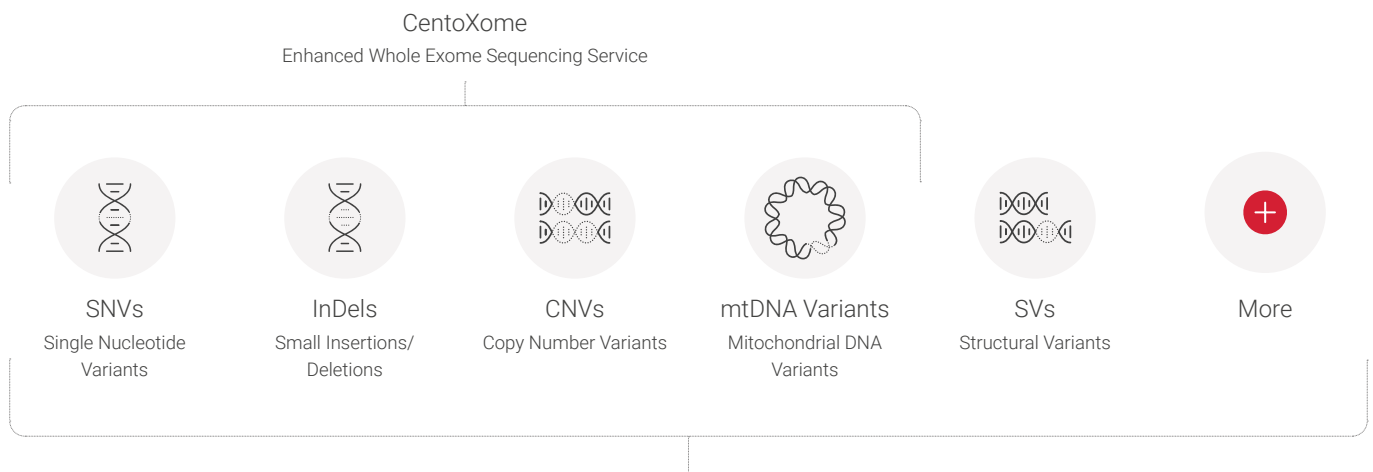

S (2–50 genes)

M (51–150 genes)

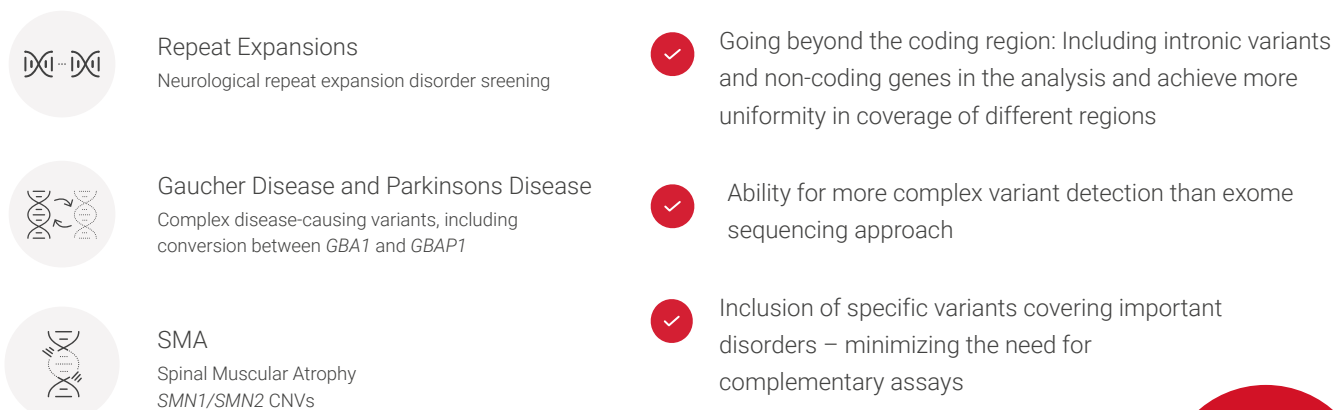

L (151–400 genes)

XL (>400 genes)

Panel Backbone Selection – Exome and Genome Sequencing

CentoGenome – Advanced Technology for Greater Insights
